

Change Request

Project Name: Member Registration & Authentication System

Date Request Submitted: October 6th, 2025

Title of Change Request: Add "Remember Me" Option to Login page

Change Order Number: CR-001

Submitted by: Sameeh, project manager

Change Category: ☐Scope ☐Schedule ☐Cost ☐Technology ☐Other

Description of change requested:

Implement a “Remember Me” checkbox on the login page once login information is filled to allow users to save their login information securely on their device for faster login instead of typing their login credentials every time.

The estimated costs for this implementation are around \$2,500 for development and \$1,500 for quality assurance testing, which will take 5 extra days to implement and deploy the new changes.

Final Update: This feature was requested but not implemented in the final version due to time limitations and security concerns with storing PINs

Events that made this change necessary or desirable:

During testing, user feedback has stated that frequent login requests are inconvenient, especially for users who regularly access the platform. By offering a "Remember Me" option, users will be able to stay logged in and not have to put in login credentials every time.

Final update: However, due to limited time and the need to ensure secure PIN handling, the feature was not added in the final version

Justification for the change/why it is needed/desired to continue/complete the project:

Adding a "Remember Me" option will improve the user experience by reducing the frequency of login prompts and making it more accessible to users for easy login with their login credentials stored securely.

Final Update: The team decided not to continue with this change because the PIN is currently stored in plaintext, and implementing long-term storage would increase security risks.

Impact of the proposed change on:

Scope: The scope would have expanded if implemented, but the feature was removed from final development.

Schedule: This implementation will take 5 extra days of given period. These changes were not applied since the feature was not developed.

Cost: addition of \$4000 for the new implementation from total budget. These changes were not applied since the feature was not developed.

Staffing: no additional staffing is required; the developer team is responsible for this implementation.

Risk: security-related risk if data not properly encrypted

Other: increase user-satisfaction and faster login

Suggested implementation if the change request is approved:

- The developer team will add a “Remember Me” checkbox on the login page using encrypted cookies
- QA tester will validate functionality and ensures security standards.
- The documentation will be updated with the addition of the new feature.

Required approvals:
